WEB3 SECURITY EXPERIENCE

DEC 2025
FEB 2026

New to the Field

Self-study, Smart Contract Security

- Cyfrin Updraft
 - Smart Contract Security – more than 30h
 - DeFi courses, including Uniswap V2, Uniswap V3, and Aave
- Johnnytime
 - Smart Contract Hacking – more than 20h

MAR 2026

Auditing Protocols

Independent Solidity Security Research

Done	Audits	8 engagements: 6 contests and 2 bug bounties on C4, Cantina, and HackenProof.
Result	Findings	6 Medium, 3 Low, 2 Info, and 2 QA-B findings.
Confident	Solidity/EVM	Solidity reading/writing, CALL/state tracing, compiler-version behavior, gas-sensitive logic, ERCs, and proxy patterns.
Confident	Ethereum	Etherscan, GitHub, TX flow, mem-pool basics, nodes/clients, and common EVM-chain assumptions.
Confident	Security/DeFi	AMMs, lending, collateral, staking, access control, accounting, oracle, liquidation, and upgradeability risks.
Can write	Delivery	Foundry/Hardhat PoCs, local fork tests, reports, fix recommendations, and architecture notes.
Outcome	Highlights	Dreamx: 4 Medium; Reaserve/eStorm: 1 Medium each; Digbi2121: 3 Low; Chain-Link/Monetrix: QA-B.

ONGOING

Building My Knowledge Base

Personal Research Notes and Tooling

- Organized recurring vulnerability patterns across access control, accounting, oracle, liquidation, and upgradeability issues.
- Maintained reusable audit checklists, PoC templates, and protocol-reading notes for future reviews.

EDUCATION

Nanjing University of Posts and Telecommunications (Bachelor's Candidate)

NANJING, CHINA 2024-2028

Helped the university build three software systems:

- Patent Search Mini Program
 - Built a WeChat mini program for searching and managing patent-related records, along with a Python-based crawler system for tracking the latest status of relevant patents.
- Smart Campus System
 - Helped implement campus service modules for mobile access and daily student workflows.
- Changzhou Public Welfare System
 - Supported public-service features and improved access to school service information.

Web3 & Smart Contract Development Overview

APR 2025 – PRESENT PERSONAL PROJECTS AND HACKATHONS SOLIDITY, FOUNDRY, CHAINLINK, ZETACHAIN, IPFS

- Built application and DeFi contract prototypes, including Chainlink VRF/Automation raffle systems and ZetaChain cross-chain swap/messaging flows.
- Practiced ERC20, ERC721, and ERC1155 standards, factory-based position tokenization, and IPFS-backed content registry design.
- Used Foundry for test-driven development, fuzz testing, deployment scripts, and deployed hackathon services with ECS, Vercel, and school servers.

Audit Skills Workflow

SOLIDITY SECURITY WORKFLOW PERSONAL TOOLING github.com/Max-wht/Ninjaboo

- Built a repeatable audit pipeline covering business-flow mapping, role/permission analysis, attack-surface localization, vulnerability hypothesis design, and PoC validation.
- Produced structured outputs: architecture notes, function call traces, Foundry/Hardhat reproduction tests, severity reasoning, fix recommendations, and report-ready finding templates.
- Used the workflow to separate source-real leads from reachable, impact-proven vulnerabilities before writing final reports.

Trustless AI Agent Review Layer

2025 SHANGHAI HACKATHON AI AGENT + WEB3 [GitHub](#)

- Implemented a decentralized review layer for AI-agent outputs, focusing on trustless review flow and output verification.
- Designed the coordination path between agent execution, reviewer validation, and on-chain state updates.

Polymarket-Based Yield Contract

2025 ETHPANDA INTERNSHIP HACKATHON FOUNDRY [GitHub](#)

- Developed a yield-oriented contract prototype around Polymarket-style positions.
- Used Foundry for Solidity implementation, unit tests, and local validation of position/accounting behavior.

Agent Task Brokerage Platform

HACKATHON PROTOTYPE MULTI-AGENT COLLABORATION MARKET

- Designed an intermediary communication layer where agents upload staged outputs and collaborators continue from prior artifacts.
- Proposed task pricing windows by difficulty: low-cost long-cycle chat tasks and high-cost short-cycle professional tooling.

Agent Market

HACKATHON DEMO AI AGENT NFT MARKETPLACE [agent_nft_market](#)

- Designed an AI Agent NFT marketplace where memory, skills, owner history, and personality persist across ownership transfers.
- Modeled agent value as accumulated training data, skill tags, conversation history, and transferable ownership.

TECHNICAL RESEARCH & CONTENT OUTPUT

Research Writing on X (@oxMax2557)

BLOCKCHAIN PROTOCOLS AND DeFi MECHANISM ANALYSIS 2026 – Present

- Published an Ethereum vs Solana series comparing governance, reliability, outage risk, redundancy, and scaling roadmaps to reason about security assumptions and systemic risk.
- Wrote DeFi mechanism notes on AMMs/liquidity pools, pricing, slippage, arbitrage-based price anchoring, and LP risk-return structure from a mechanism-design to attack-surface viewpoint.
- Analyzed Aave over-collateralization, liquidation thresholds, recursive leverage, and flash-loan risks; also used diagram notes to study EVM memory layout and bridge workflows.

White-Hat Community Participation

PASHOV GROUP, IMMUNEFI, AND HACKENPROOF DISCORD COMMUNITIES 2026 – Present

- Active in white-hat and Web3 security communities, following audit discussions, bounty workflows, protocol announcements, and researcher communication patterns.

Project Focus

-  Solidity security workflow
-  AI agent coordination
-  Hackathon prototypes
-  Open-source project delivery

Methods

-  Protocol and product flow mapping
-  PoC-driven validation
-  Security report writing
-  Foundry, Hardhat, Remix
